SECTION 9(d)
RESTRICTIVE ROUTING - SATELLITES
2nd Revised Page 1

CODES

RESTRICTIVE ROUTING - SATELLITES

011 160 182 183 184 185
186 187 188 191
NPA+151

Must never be routed to a satellite trunk terminating in the North American Network.

X 150 174 192 193 195 196
199

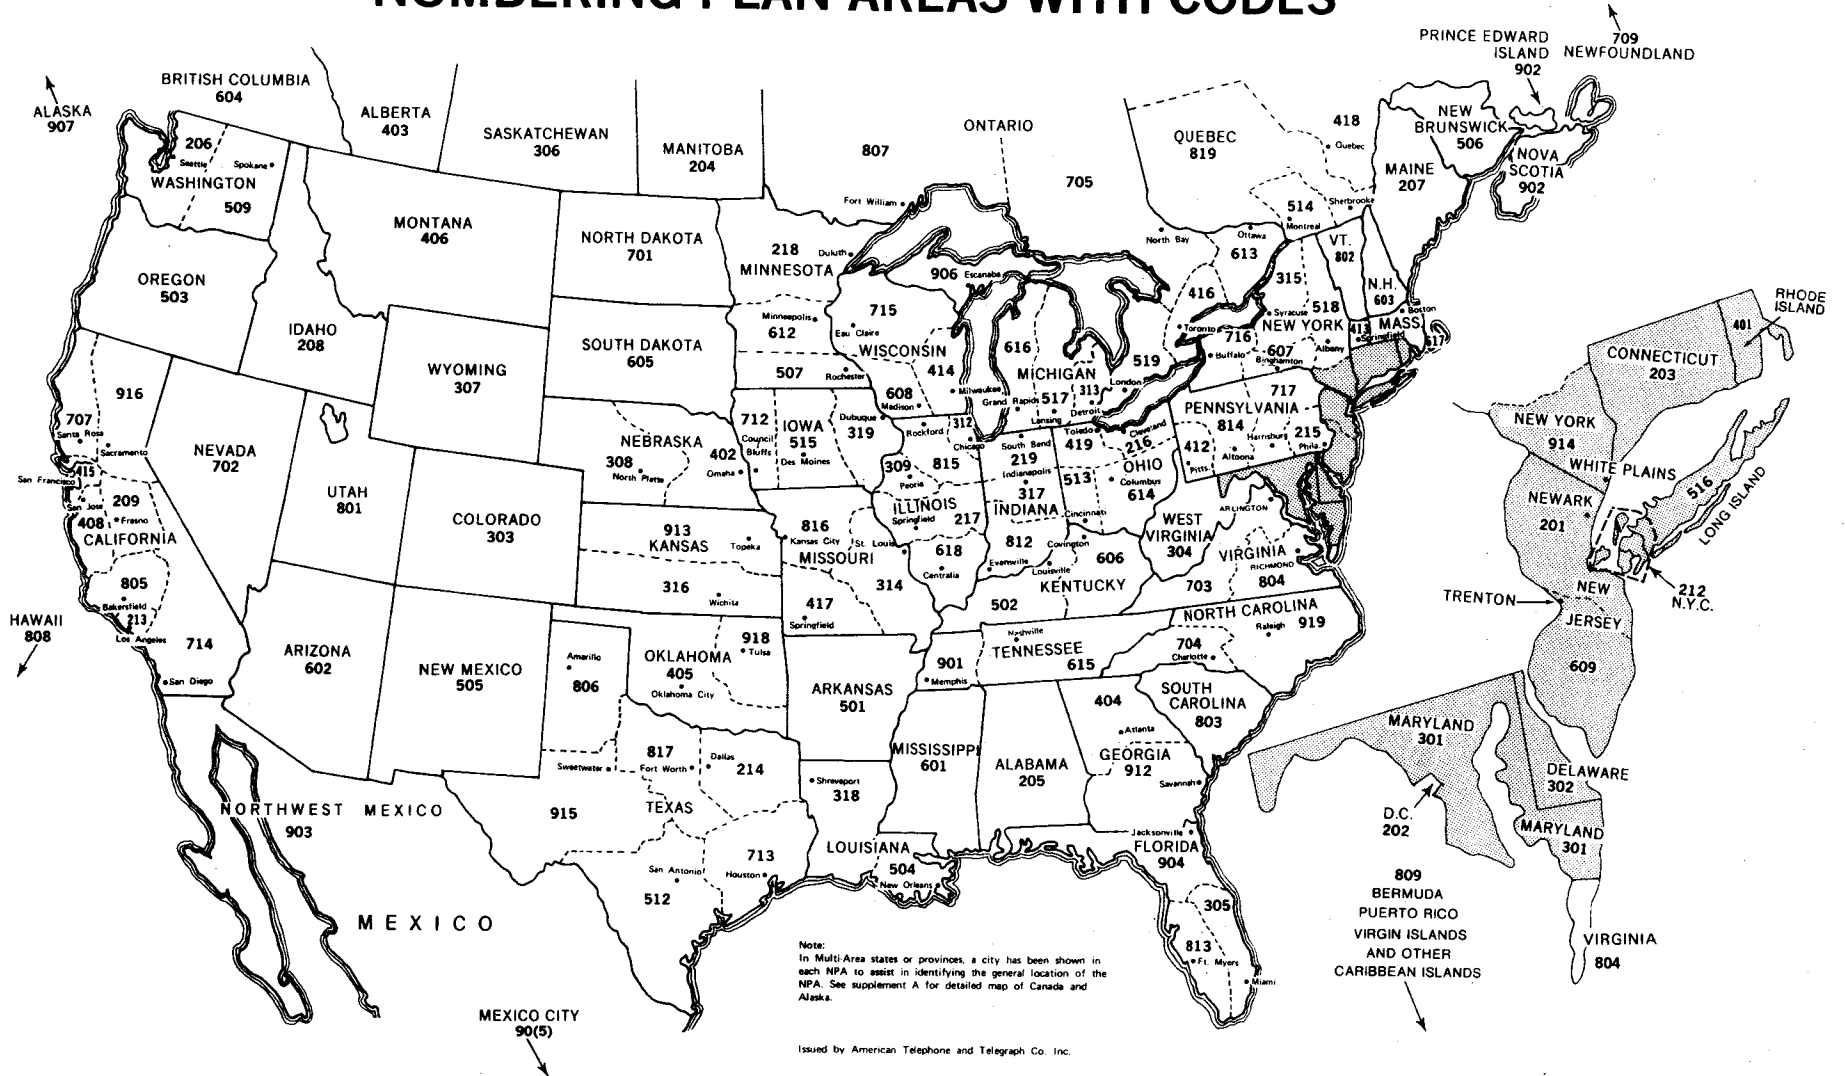

Should not be routed to a satellite trunk group except by the originating switcher located outside the 48 contiguous States that converts to the code.

175 178 179 197 808 809
907

Should not be routed to a satellite trunk by any switcher in the 48 contiguous states unless the trunk group terminates within the NPA of destination. Switching systems outside the "48", may only route these codes on a satellite trunk group if the via switcher code converts to the appropriate cable control.

Calls coming in on satellite facilities destined for termination in the "48" should be screened from another satellite trunk at the gateway office. If the call overflows at the gateway, up chain to the home CSP, a dedicated group class marked as a satellite trunk group must be used between the two offices. Similar screening would then be required at the higher ranking office to prevent the possibility of selecting a satellite trunk there. This situation will probably occur at three places Jacksonville - Rockdale, New York - White Plains, Seattle - Sacramento.

NUMBERING PLAN AREAS WITH CODES

Note:
In Multi-Area states or provinces, a city has been shown in each NPA to assist in identifying the general location of the NPA. See supplement A for detailed map of Canada and Alaska.

Issued by American Telephone and Telegraph Co. Inc.

ISSUED: January 26, 1977
